

4Life® TF Immune Spray™

TWO IMMUNE BOOSTING INGREDIENTS, ONE POWERFUL FORMULA

Daily Immune System Support

Available as an easy-to-dispense, orange-flavored throat spray, TF Immune Spray is a great-tasting formula that combines the anti-bacterial properties of Colloidal Silver with the immune power of Transfer Factor XF. It contains no artificial colors, flavors, sweeteners or preservatives. And, as you spray it within your mouth, TF Immune Spray directly combats bacteria and viruses at one of the most common points of entry into your body, making it a very powerful daily nutritional supplement.

Transfer Factor XF, also found in 4Life Transfer Factor Classic, and Colloidal Silver both play important immune-enhancing roles, establishing TF Immune Spray as one of the foremost preventative wellness products available today.

Key Points

- **Transfer factors:** Transfer factors are tiny molecules that transfer immunity information from one entity to another, such as between a mother and her infant who she breastfeeds. Although the most notable function of these smart molecules is to speed up the recognition phase of an infection, making the duration of an illness shorter, they also promote the immune system's ability to remember past invasions, allowing your body to more quickly respond to similar health threats.

4Life made its mark on the health industry with our original 4Life Transfer Factor Classic formula that contains patented transfer factor technology, sourced exclusively from cow colostrum.

- **Colloidal Silver:** Long known for its health-promoting properties, silver stands out as an amazing element in the development of a strong immune system. Ancient Persian, Babylonian and Greek civilizations were all aware of silver's ability to disinfect, and therefore utilized silver containers for storing and transporting water dating back to 4000 B.C. Today, Colloidal Silver has been touted as one of the most effectively absorbed forms of silver. Possessing both anti-bacterial and anti-inflammatory properties, Colloidal Silver has been shown to be a catalyst, disabling the enzyme that bacteria, fungi and extra-cellular viruses use for their oxygen metabolism—essentially suffocating the organism. Further, because of the broad action of Colloidal Silver, resistant strains of bacteria cannot develop, so there is no concern about contributing to the current medical threats of antibiotic resistance.

4Life's Colloidal Silver is the result of combining a new patent-pending technology with the long-known beneficial health properties of silver. It quickly combats a number of bacteria, viruses, germs, fungi and pathogens, before they can become a threat to your health. In addition, it has been shown to be two to three times more effective than the other Colloidal Silver products tested. Its bioavailability exceeds 99 percent. This is in large contrast to other Colloidal Silver products currently on the market with bioavailabilities ranging from 15-65 percent.¹

- **Convenient and Effective:** Its unique and effective spray delivery system makes TF Immune Spray easy to carry with you and use throughout the day. And, because TF Immune Spray is delivered through the mouth, it directly affects the mucosal tissues, strengthening an immune response in an area that is under constant attack from microbial threats.

Did you know?

An independent study showed that 4Life Transfer Factor Classic Formula raised Natural Killer cell activity in the immune system by 204 percent.²

After prolonged use, the therapeutic value of synthetic antibiotics has declined because of the emergence of resistant organisms. In fact, antibiotic resistance is becoming more and more of a danger in today's world with reports indicating that "... as many as 40 percent of the strains of *Streptococcus pneumoniae* (strept throat), the most dangerous pathogen for children and the elderly, are drug resistant." (May 10, 1999, edition of U.S. News & World Report)

An article in Science Digest (March 1978, p. 57) states, "An antibiotic kills perhaps a half-dozen different disease organisms, but silver kills some 650. Resistant strains fail to develop... Even tiny amounts of silver wipe out huge quantities of disease organisms in water... After testing 23 methods of purifying water, NASA selected a silver system for the space shuttle."

Technical Points

- With more than 50 years of research and hundreds of scientific papers backing it up, the safety and outstanding immune system benefits of *transfer factors* have been established by world-leading scientists and physicians.
- Colloidal Silver is simply a suspension of silver particles in purified water. Silver provided in this form is highly absorbable, therefore improving its overall health benefits.
- Natural Killer cells are important immune cells that provide a crucial first defense against infectious agents and diseased cells.

1. Tested at the Brigham Young University Microbiology Laboratory, Provo, Utah.

2. Test results obtained from a blind study conducted by Dr. Anatoli Vorobiev at the Russian Academy of Medical Science.

*These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure or prevent disease. For use in the United States.

DIRECTIONS: Spray 4Life Transfer Factor Immune Spray into mouth three (3) to six (6) times, swish around in mouth for 30 seconds, then swallow. Additional amount may be used if desired.

Serving Size: 1 Spray
Servings Per Container: 120

Supplement Facts

Amount Per Serving	DV%
Transfer Factor XF®	25 mg *
Patented concentrate of transfer factors and other natural components from cow colostrum.	

*Daily Value (DV) not established

Other Ingredients: colloidal silver solution (14ppm), natural orange flavor and vegetable glycerin.
