

Transfer Factor Chewable™

WITH AN ALL-NATURAL BURST OF CITRUS CREAM FLAVOR

Daily Immune System Support

The immune system is a complex network of organs and cells and is the foundation of our health and wellness. Indeed, the well being of the immune system largely determines whether a person will be healthy or sick. Today our immune systems are being pushed to the limit, creating a need for optimal nutritional support.

4Life™ offers an exclusive supplement on the forefront of nutritional science and arguably the most advanced immune system support available today—Transfer Factor. Transfer Factor is derived from bovine colostrum. The key immune elements of colostrum are extracted through a patented process, separating the un-needed portion, leaving only the powerful immune properties called *transfer factors*. These unique messenger molecules educate your immune system and provide the vital information it needs to recognize and respond effectively to potential threats. The immune system archives information supplied by *transfer factors* for repeated use as needed. Whether an individual's need is to induce, suppress or work against a specific immune threat at a given time, Transfer Factor brings unique support to the immune system by boosting and balancing as your body needs it.

Each day, immune cells in the body die while newly generated cells take their place and carry on the biological process. These new cells are in need of the immune "programming" that *transfer factors* provide making daily supplementation with Transfer Factor essential to provide up-to-date support against the numerous immune challenges of daily life. Because 4Life Transfer Factor is patented, proprietary, safe and effective, doctors throughout the world not only use 4Life Transfer Factor themselves, but also recommend it to their patients. 4Life makes it simple for everyone to obtain their daily immune system support with the convenience of Transfer Factor in a citrus cream flavored chewable tablet.

Key Points

- **Transfer Factor XF:** 4Life's proprietary concentration of *transfer factors*, extracted from bovine colostrum using an exclusive and patented process licensed to 4Life. (U.S. Patent 4,816,563)
- **Transfer Factor vs. Colostrum:** The vital immune information in colostrum is contained primarily within *transfer factors*. Through a unique process, 4Life extracts these vital *transfer factors* from bovine colostrum and encapsulates them for everyday use. This provides a highly concentrated immunity formula, rather than diluted bulk colostrum.
- **The 3 R's:** 4Life Transfer Factor supports and educates the immune system in three important ways, it:
 - Recognizes potentially harmful invaders
 - Responds and quickly restores immune balance
 - Remembers the 'bad guys' for future encounters
- **Immune Support for All Ages:** Supplementing your diet with 4Life Transfer Factor on a daily basis can significantly improve your immune system's ability to fight invaders and help you lead a healthier life. This great-tasting chewable supplement contains no artificial sweeteners and is ideal for the on-the-go person or those that prefer a chewable supplement over swallowing a capsule. Transfer Factor's excellent safety track record makes it an ideal immune supplement for the young, the old and everyone in between.

Did you know?

Transfer factors have been studied for more than 50 years and an estimated \$40 million has been spent on their research, resulting in over 3,000 scientific papers documenting their benefits.

An *in vitro* study tested the efficacy of numerous natural supplements to boost the immune system. 4Life Transfer Factor boosted Natural Killer Cell activity by 103%, more than two times as much as the next highest supplement.

As we get older, our immune system's ability to respond effectively to threats and keep the body well decreases dramatically. Stress, poor eating habits and other environmental factors all place enormous amounts of pressure on our immune systems, making it more and more difficult to fight against the pathogens in our world.

The Centers for Disease Control (CDC) has estimated that one half of the more than 100 million yearly prescriptions for antibiotics are for non-bacterial conditions where antibiotics would be ineffective. This alarming trend has greatly contributed to the amount of antibiotic resistance.

Technical Points

- *Transfer factors* are systemic. Their small molecular weight allows them to be absorbed into the bloodstream, which enables them to work freely throughout the entire body.
- *Transfer factors* are not species-specific; therefore they can be exchanged between animals and humans because the immune information they provide is universally understood by all immune systems.
- *Transfer factors* are effective when taken orally, their potency is not degraded by stomach acid or digestive enzymes.

DIRECTIONS: Take one (1) tablet three times daily.

Serving Size: One (1) Capsule
Servings Per Container: 90

Supplement Facts

Amount Per Serving	DV%
Transfer Factor XF™	200 mg *
(A patented concentrate of transfer factors and other natural components from bovine colostrum.)	

Other Ingredients: fructose, maltose, sorbitol, natural flavors, stearic acid, malic acid and silica.
